A. Nikhil Kumar

+91 98864 86071 | compsciinikhil@gmail.com | linkedin.com/in/compsciinikhil | github.com/CompsciiNikhil

Professional Summary

Final-year Computer Science undergraduate with strong foundations in Data Structures & Algorithms, OOP, Design Patterns, DBMS, Operating Systems, and Computer Networks. Experienced across the full SDLC, including business requirement analysis, microservices-based API design, development, testing, and deployment, with hands-on exposure to enterprise CRM workflows through the Salesforce Compass Program. Seeking a Developer/Quality Engineering role to design, build, and validate reliable, production-grade systems.

Experience

Salesforce Compass Program — **May 2026 - Present**
Participant & Project Contributor — *Bengaluru, India*

- Contributing to a live enterprise CRM project as measured by on-track completion of program milestones, by analyzing business requirements and translating them into Salesforce platform solutions.
- Collaborating within Agile ceremonies (sprint planning, stand-ups, retrospectives) as measured by consistent sprint delivery, by coordinating structured stakeholder communication across a corporate SDLC framework.

E2E Management Services — **June 2025 - July 2025**
AI Engineering Intern — *Bengaluru, India*

- Achieved 96% AUC-ROC on a fraud detection model across 284K+ transactions as measured by model validation metrics, by designing a full development pipeline covering data preprocessing, SMOTE-based class balancing, and rigorous train/test/validation splits.
- Reduced false-positive rate by 18% as measured by post-deployment monitoring, by conducting systematic feature engineering and hyperparameter tuning, validated through peer code reviews before shipping to production.
- Ensured deployment reliability as measured by stable endpoint uptime, by applying design-pattern-driven modular code structure and writing structured test cases for API request/response validation on a FastAPI inference endpoint.

Projects

Consumer Credit Risk Verification API | *Python, FastAPI, PostgreSQL, SQLAlchemy, PyTest, Postman*

- Shipped a rule-based credit risk scoring API as measured by 33/33 passing automated tests across business logic and API layers, by implementing a modular, design-pattern-driven risk engine weighted on credit score, debt-to-income ratio, and employment status.
- Ensured reliable production releases as measured by zero deployment-blocking defects, by building a CI/CD pipeline with automated test gating and live cloud deployment on Render.

Smart Recruitment & Interview Screening | *Next.js, FastAPI, ConvexDB, Gemini, LiveKit, MediaPipe, Monaco*

- Ensured reliable handling of untrusted user-submitted code as measured by consistent sandboxed execution outcomes, by designing REST API endpoints across a microservices architecture with request validation and Piston-backed timeout/runtime-error handling.
- Maintained consistent session state across live interview flows as measured by stable proctoring and editor sync, by coordinating frontend-backend state for MediaPipe-based proctoring and Monaco Editor integration.

GenMark - AI Content Origin & Misuse Detection | *React, FastAPI, Algorand, MongoDB, TypeScript*

- Enabled tamper-proof content provenance as measured by reliably committed on-chain records, by architecting a microservices-based system and confirming blockchain transaction status before returning success to the user.

AI Travel Planner | *React, TypeScript, FastAPI, WebSocket, GPT-4o, Amadeus API*

- Improved itinerary personalization as measured by cross-validated recommendations, by structuring a multi-agent debate framework integrating GPT-4o voice/text interaction with real-time Amadeus flight and hotel data.

Intelligent Multi-Factor IoT Locking System | *Python, OpenCV, Raspberry Pi, RFID, SQLite, Twilio*

- Cut onboarding time by 50% as measured by deployment consistency across test installations, by authoring structured setup documentation for a dual-authentication smart lock combining gesture recognition and RFID.

Skills

Languages: Java, Python, C, JavaScript/TypeScript, SQL
Core CS Fundamentals: Data Structures & Algorithms, OOP, Design Patterns, DBMS, Operating Systems, Computer Networks
Software Practices: SDLC, Agile Methodologies, Code Reviews, Microservices Architecture
Web & Backend: REST APIs, FastAPI, Node.js, React, Next.js, WebSocket
Databases: SQL, PostgreSQL, MongoDB, Firebase
Testing & DevOps: PyTest, Postman, Git/GitHub, GitHub Actions (CI/CD), Docker, Linux (RH124 Certified)
Cloud: Render

Education

BNM Institute of Technology — **2023 - Present**
B.E. Computer Science Engineering, CGPA: 9.53 (till 6th Sem) — *Bengaluru, India*

St. Joseph's Pre-University College — **2021 - 2023**
Karnataka State Board, 85.67% — *Bengaluru, India*

St. Joseph's Indian High School — **2021**
Karnataka State Board, 93.92% — *Bengaluru, India*

Certifications

Red Hat System Administration I (RH124) | Postman API Fundamentals (Student Expert) | Introduction to MongoDB, MongoDB University | Azure IOT Fundamentals | Software Engineering & Agile Software Development, Infosys Springboard

Achievements

- **Operations & Engagement Lead, SIGGRAPH BNMIT**: organized design and innovation events for a 200+ student community.
- **Super 60**: selected among the top 60 students for an elite leadership and networking programme at BNMIT through a 4-round competitive selection process.
- **Hackathon Finalist** in multiple national and intercollegiate hackathons (AI, IoT, social impact), building solution-driven prototypes under tight deadlines.
- **Samsung Innovation Campus, AI Program (2025)**: built and evaluated ML models end-to-end on real-world datasets.
- **Core Committee Member, Tatva**: BNMIT's annual intercollegiate fest, overseeing event operations, stakeholder coordination, and logistics management.
